**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 5-7, and 15-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakano et al (US 6,273,230).

Nakano et al disclose a power transmission comprising: a first rotating member (34,35) driven by an external drive source (41); an electromagnetic solenoid (33) provided on said first rotating member (see Fig 1); a second rotating member (unnumbered, see Fig 1) connected to a main shaft (39) of a rotary apparatus (compressor); and a mechanism (38) for engaging a plunger (37) of said electromagnetic solenoid to and for disengaging said plunger from said second rotating member (col. 7 line 57 – col. 8 line 30).

Re claims 5 and 15, comprising a guide mechanism (35b), wherein said guide mechanism for guiding said plunger (37) of said electromagnetic solenoid along said first rotating member is provided between said plunger and said first rotating member (see Fig 1).

Re claims 7 and 17, said rotary apparatus is a compressor for use in an air conditioning system for vehicles (col. 1 lines 5-15).

***Allowable Subject Matter***

3. Claims 2, 9, and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Response to Arguments***

Some further comments regarding the applicant's remarks are deemed appropriate.

The applicant argues that the Nakano et al reference fails to meet the limitations of the claims because Nakano et al fail to disclose a second rotating member as required by the claims. However, figure 1 shows a second rotating member (unnumbered L-shaped member) connected to the part (39), which is the compressor shaft. The claim also requires that the plunger be able to engage and disengage from the second rotating member. Figure 1 shows the plunger (37) attached by a mechanism (38) that is bolted or screwed to the second rotating member (unnumbered L-shaped member). Those bolts or screws allow the plunger and the second rotating member to be engaged or disengaged.

The applicant's remarks have been accorded due consideration, however, they are not deemed fully persuasive.
